

Claudia Brunori,
ENEA Senior Researcher (chemist)

Director of the Department for Sustainability, Italian Agency for New technologies, energy and sustainable economic development.

She has been working with ENEA as Research Scientist since 2000, as Research Director since 2010, as Vice Director of the Department of Sustainability since 2020 and as Director of the same Department since March 2024. She studied Chemistry at the University of Rome, La Sapienza.

Her scientific interests are focused on technologies and tools for sustainability, the transition towards the circular economy and adaptation to climate change of production systems and territorial management. She coordinates study, research and demonstration activities in the field of the circular economy with particular reference to the development and implementation of technologies and tools for the eco-innovation of businesses and the production system, for the efficient use and management of resources in urban and industrial areas and along value chains.

Strategic areas of the Department: agrifood, biotechnologies, manufacturing processes, advanced and critical materials, climate change models and observations, natural capital preservation and valorization, urban regeneration.
